UNCLASSIFIED

**NATIONAL SECURITY AGENCY (NSA)
EVALUATED DESTRUCTION DEVICES**

1. The NSA maintains a list of equipment which has been evaluated as meeting the requirements for routine destruction of specific classified media (paper, cryptographic key tape, compact disks etc.). This approval is informational and advisory only. The approval is based on an examination of residue and a physical security evaluation of the equipment. Factors such as reliability, rate of wear, and frequency of parts replacement have not been evaluated; and NSA does not endorse manufacturers' claims concerning these aspects. Hourly volume rates are estimates based on average rates for destruction of paper material and may vary depending on variety, volume, and loading. It has always been and continues to be, the machine operator's responsibility to periodically inspect the resulting residue of each material destroyed for compliance with the secure particle standards.
2. The list of evaluated cross cut shredders has been transferred to the EVALUATED PRODUCTS LIST FOR HIGH SECURITY CROSSCUT SHREDDERS (NSA/CSS EPL 02-01-A.).
3. Other equipment(s) may will be added to this list as they are tested and pass the evaluation. Queries on these or other equipment should be addressed to DIRNSA, ATTN: C323 or by telephone at (410) 865-2870 or DSN 244-6563.
4. Some of the equipment in this list is available from the GSA Federal Supply Schedule.
5. Devices in this list should not be used for the destruction of microcircuits, floppy disks, hard disks, microfiche, microfilm, or other high density magnetic, optical or reduction film material unless explicitly specified.
6. Devices in this list which are listed as "No Longer in Production" may be still used only if the machines are in good working condition and can be properly maintained. Parts and service are typically available for at least five (5) years after production ends. Please consult your local service facility for the availability of service and parts for older equipment before accepting them for reuse.

PRODUCT UPDATES

1. The KEY TAPE DESTRUCTION DEVICE section has been added as GROUP E. This group encompasses devices designed to operate in environments (offices, etc.) that are not suitable for conventional disintegrators. All disintegrators previously approved to destroy key tap will continue to be authorized to destroy key tape.

GROUP “D” NOTES:

1. This list is only for devices for CD media that is formatted using the Phillips/Sony Standards and Cross-interleaved Reed Solomon Error Correction Code Encoding and is NOT for DVD media. There are basically two types of CD media, that which you can not record on (e.g. Read Only (ROM)) and that which you can record on (CD-R). CD-R is broken down into two categories, Write Once (WO), and re-writable (RW). Each type (e.g. CD-ROM, CD-WO, and CD-RW) has a unique construction and each must be examined separately in the destruction process to be certain that the process or equipment can adequately destroy each type. If any of the ancillary components of the CD package (e.g. CD case, jewel case, paper insert) are marked with or contain any classified information, then those materials must be destroyed according to the standards set for those individuals materials and information.
2. Consult your Site Security Office or Controlling Authority for the proper destruction standard for the specific media.
3. When using the Battery Power Option, a 12 Volt DC battery with a minimum of 19 Amp Hours of current is required. The total number of CDs securely destroyed was 75 but may be more or less depending upon the batteries condition, size (Amp Hours) and total load drawn.
